Where to find CS Jobs Introduction

This lesson will discuss where to find jobs that require a computer science (CS) degree.

This lesson also will go over several approaches to finding jobs that require a CS degree. They are the following:

- Popular CS job Web sites
- Social network and volunteer
- Work study and internship
- Entrepreneurship

In fact, all these approaches are complementary to one another. You may need to apply most, if not all, of them. The main purpose for introducing job hunting at such an early stage is to provide you with some basic but critical information on how to quickly search for CS jobs so that you can start preparing to find your dream job.
